# The Clipper Difference.

Construction & Features Competitors Can't Match

## Dura Tuff Roof

### A. One Piece Seamless Skin

### B. Dura Tuff Wood Protective Layer

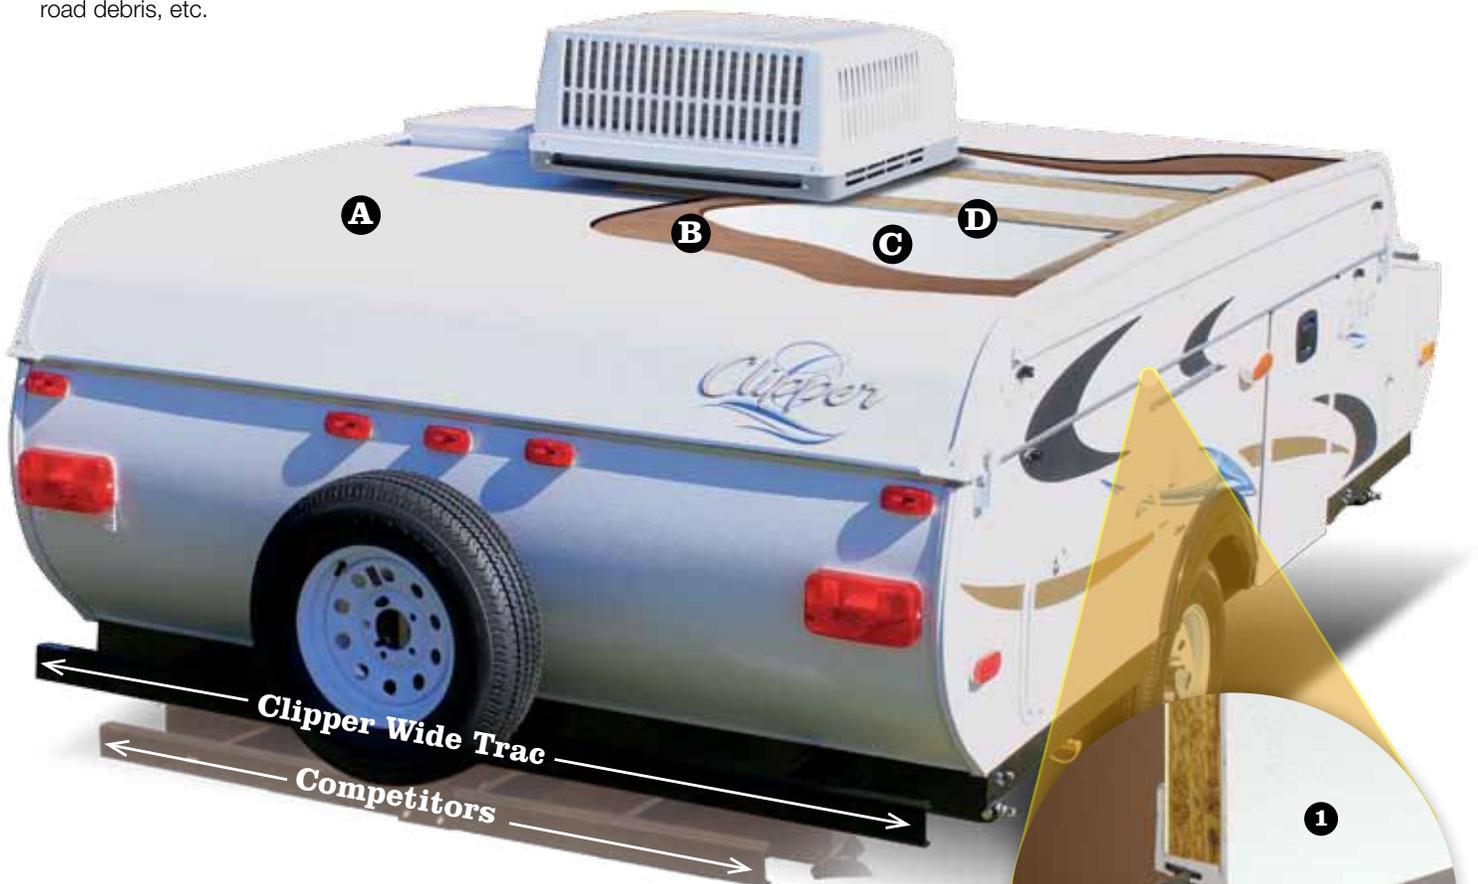

No one else includes the extra wood layer between the top skin and internal foam that provides stiffness and reduces the probability of damage due to hail, road debris, etc.

### C. Foam Roof Structure

### D. Steel Reinforced Wood Frame

The roof is framed with steel supports to accept A/C on all models without extra reinforcement.

- Roof vent is placed off to the side so the A/C can be center-mounted without having to remove the vent. This design allows you to have both the vent and A/C.

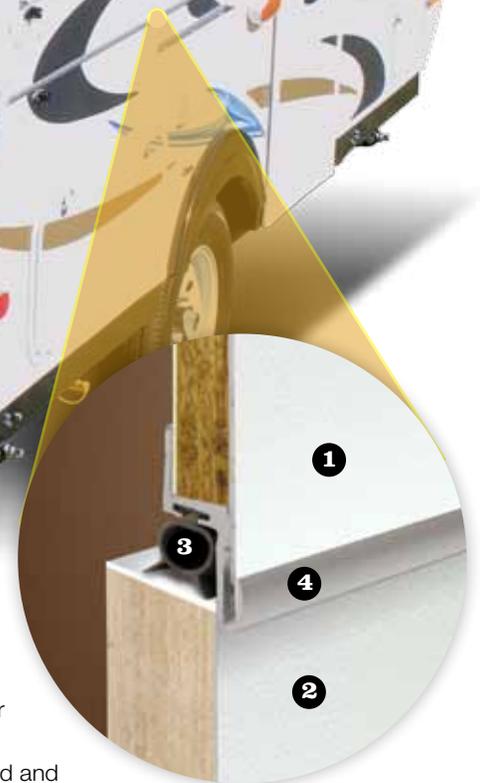

## Wide Trac Suspension Better safety and stability on the road.

- Widest stance of any folding camper
- Improves towing safety and stability
- Stronger axle beams than most competitors
- Steel frame with automotive E-coat finish. E-Coat is a 12 step cleaning and finishing process that applies multiple layers of protection to fully penetrate and coat INSIDE and OUT. Powder coating used by some competitors cannot cover inside surfaces.

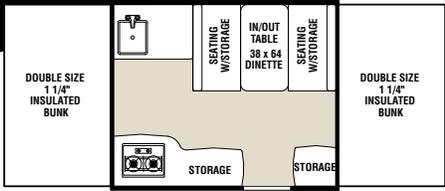

## Roof Side Z-Rail Channels water away.

- Z-Rails on roof perimeter and sidewalls keep wood above water level collection points.
- Others use U channel where wood and water can come in contact at the bottom of the channel.
- Channels are kept open to allow water to run out like a gutter.
- Others attempt to seal channels to keep water out; when the seal is compromised, water will collect and cannot escape.

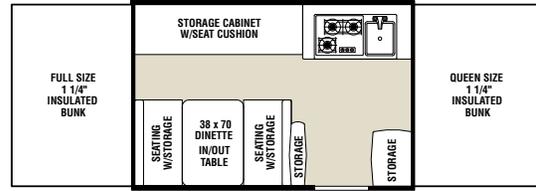

1. Roof's Outside Skin
2. Body's Outside Skin
3. Water tight Seal
4. Z-Rail channels water away from wood
