

REDWOOD

RESIDENTIAL VEHICLES

WHY REDWOOD?

Our story is simple. Redwood was created in 2010 for the purpose of providing the exploding Baby Boomer market with a high quality, full-time, residential fifth wheel at an affordable price. We listened to the customer and the result has been a game changing fifth wheel that leads the industry in quality, innovation and value for the money.

13 Gallon Pull-Out Trash Container

Redwood's Clima-Comfort package comes standard on all fifth wheels. Clima-Comfort combines residential fiberglass insulation with ultraflect reflective insulation to provide a unique thermal barrier that works all four seasons. During the winter your Redwood reflects escaping heat back towards your living space, reducing heat loss and lowering heating costs. During the summer it reflects heat away from your living space, reducing heat gain and lowering air conditioning costs.

IS THE CUSTOM FOUNDATION YOUR RV IS BUILT ON.

FALCON WELDED HITCH RECEIVER

All FIT foundations come equipped standard with an integrated hitch receiver capable of hauling 3,000 pounds of additional cargo (300 pound tongue capacity). Now you can take more fun along for the ride.

FALCON AXLES

- Falcon 7,000 pound capacity axles are built to last and offer many advantages over the competition:
- ◆ Self Adjusting Brakes improve stopping time up to 50% and lower maintenance costs.
 - ◆ Powder-coated axle tubes protect against corrosion.
 - ◆ Zinc plated mounting hardware prevents against rusting and corrosion improving service jobs.
 - ◆ Waterproof 3M connectors in all brake wiring prevents corrosion at connection point.
 - ◆ Integrated spindle/brake flange provides precise brake mounting and maximizes performance.
 - ◆ Robotically welded spindles and spring seats provide precision and can be traced to production run.

FALCON SUSPENSION

Your suspension should absorb road shock, not transfer it! This is why all FIT foundations are equipped standard with the Falcon-Flex rubberized suspension system. Falcon Flex provides owners a much smoother ride by virtually eliminating vibrations caused by road bumps, holes and cracks. This system, tested independently by Roush, scored a 7.5 as opposed to the competition's 5.5. Falcon Flex was put through grueling load tests and passed with flying colors.

THE FALCON FRAME

Every Falcon Frame utilizes the very best materials available:

- ◆ Powdercoated frame for protection.
- ◆ Heavy duty 12" I-Beam main rails.
- ◆ Drop section of chassis is 10" I-Beam.

FALCON QUAD STEPS

The Falcon Quad Radius Step is simply a better step. More logically laid out than its competitor's, the Falcon radius step stores easier and is easier to use. With one hand, the step can be expanded and retracted with little effort.

SINGLE POINT OF CONTACT

Falcon Integrated Technology makes everything easier. One single point of contact makes it easier for **OWNERS** to understand and easier for **SERVICING DEALERS** to get answers and solutions. Competitors use a patchwork of suppliers for their coach's foundation making troubleshooting, well, troublesome! Simplify your next RV adventure with a custom FIT foundation from Redwood RV.

FALCON HYDRAULIC SLIDE-OUT SYSTEMS

Falcon sets the standard for hydraulic slide-out systems. It provides years of worry free operation and has features that can't be matched by the competition.

FALCON AUTOMATIC LEVELING

No more crawling on the ground with boards or blocks to get your coach level because every Falcon Frame comes standard with the Falcon Level Up System. Save time and energy setting up with the best leveling product on the market:

- ◆ One touch automatic leveling gets you camping in under 45 seconds.
- ◆ Fast and powerful aluminum hydraulic leveling jacks extend and retract in mere seconds all while adding less weight to the coach.
- ◆ One hydraulic pump as opposed to the competition's four.

FALCON PINBOX SOLUTIONS

FIT foundations come standard with the Trail Air™ Rota-Flex pivoting head pin boxes. Rota-Flex utilizes a rubberized compound which absorbs fore to aft motion, a.k.a. "chucking," between the tow vehicle and 5th wheel to give you an overall improved ride.

OPTIONAL AIR RIDE HITCH

Optional Tri-Glide Air Ride Pin Box is the first air spring system to both reduce chucking and control vertical push/pull movement using elementary geometry used in rocking chairs for hundreds of years. Simply put, when the coach is in neutral position, the lower jaw always sits at its lowest point. As the hitch encounters road vibrations, the system lifts the coach, but gravity always returns it to its lowest position.
