

NUWA

HITCHHIKER 5TH WHEELS

Optional Graphics Upgrade

Standard Graphics Package

NuWa proudly “re-introduces” the LS (Light Series) of quality 5th wheels for 2012. Knowing that many 5th wheel buyers want a “truly” smaller yet quality 5th wheel at a more affordable price, NuWa is bringing all new floorplans at lower prices to the market. The basics of the new LS are identical to the Discover America models, and will use the same Young’s frame and exceptional cabinetry and laminated Dow foam construction features.

This means buyers of the LS can be assured that the reliability and integrity of the structure and glide rooms and utility systems is in place. Designing smaller and eliminating some of the luxury creates significant savings for customers, yet superior livability and quality is obvious. Many RV’ers are downsizing and the LS will meet their expectations much better than the mass produced products, which are shortsighted in providing more trouble free trailers. And our model sizes are legitimate compared to the questionable practice of manufacturers, who build a trailer several feet longer than model name suggests.

The same craftsmen who build NuWa's luxury Champagne models will build the new LS product, and the same customer care philosophy will be given to the buyers of this product. Eight initial models are now available for order, although the two 34' models will not be displayed until Feb. or early March. The uniqueness of the 27.5 model shows the skill of NuWa in developing superior livability in short lengths. This is a unit which could satisfy the livability needs of an extended user couple or the younger couple wanting to seek the isolated areas with a smaller trailer.

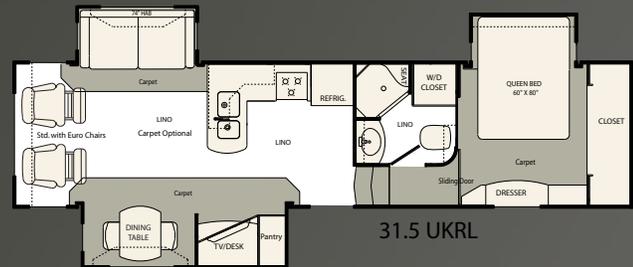

Flexibility of design allows the 27.5 to offer a choice of booth dinette, dining table and chairs or two Euro chairs. Some people will choose the booth dinette and still get the rear fold down table to be used as a desk area. Other models offer booth dinette in the new deeper glide. Inspect the new LS and see if you don't find the same magic that made the previous LS family of products so popular with RV'ers.
