

THE ORIGINAL
Equal-i-zer[®]
SWAY CONTROL HITCH

75
YEARS OF
SAFETY

Recommends and Sells

**For information about your RV, usage, required maintenance and warranty,
please refer to your owners' packet, manufacturer's website or
www.progressmfg.com for hitch information.**

For hitch maintenance, please lube as follows:

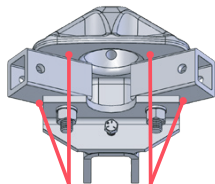

THE ORIGINAL
Equal-i-zer[®]
SWAY CONTROL HITCH

What lube should you use?

The friction surfaces of the head and sockets should be kept clean and well lubricated with a high quality multi-purpose or bearing grease. We recommend Equal-i-zer high performance lubricant.

Where should you lube?

**Lubricate
here**

Regularly apply a thin coat (pea sized drop) of lubricant to the sockets. Do not lubricate the L-brackets attached to the trailer frame.

When should you lube?

The frequency of lube application depends on how often you tow. For most campers, lubing each season works well. If the sockets are dry or starting to rust, then it's time to lubricate.

Why should you lube?

Lubricating your hitch properly will extend the life of the sockets and the hitch head, and keep your Equal-i-zer on the road for years to come!
