Dedication - We would like to dedicate this newsletter to one of our own. Josh joined the Momot team 18 years ago. With his charming personality and quick wit, he fit right in and quickly became a part of our work family. He was certainly cherished by many who knew him. There wasn't anything he wasn't able to do. Your ability to always be yourself and never falter in your dedication to your work and your family speaks volumes of who you truly are. You will forever be in our hearts - Rest In Peace.

*In Loving Memory of
Joshua C. Boglisch
March 25, 1980 - July 16, 2022*

Fill not your hearts with pain and sorrow, but remember me in every tomorrow.

Remember the joy, the laughter, the smiles, I've only gone to rest a little while. Although my leaving causes pain and grief, my going has eased my hurt and given me relief. So dry your eyes and remember me, not as I am now, but as I used to be.

Because, I will remember you all and look on with a smile. Understand, in your hearts, I've only gone to rest a little while. As long as I have the love of each of you, I can live my life in the hearts of all of you.

URGENT ELECTRICAL REQUEST

We are expecting some HOT and HUMID weather this weekend.

- PLEASE run your water heater on propane.
- PLEASE run your refrigerator on propane.
- PLEASE CHARGE GOLF CARTS AT NIGHT.

Our guidelines state that our electrical system is designed to supply basic electrical usage only. We DO NOT GUARANTEE that every site will be able to run air conditioning. Please help us out so we can all have an enjoyable weekend. See Dave or Tim in the office with any questions. Here is an interesting article I found I reference to this:

BEFORE YOU BLOW YOUR "BREAKER"

Take a look at the chart below to add up the amperage requirements for these RV Appliances that are in almost every camper. It is surprising how fast the AMPS add up which causes breakers to trip. Knowing the AMPS of all the electrical appliances in your camper can help you manage electrical use and help prevent the inconveniences of "MY ELECTRICITY WENT OUT"

- | | |
|-------------------------------|----------|
| • Air Conditioner (15,000BTU) | 16AMPS |
| • Electric Water Heater | 12.5AMPS |
| • Microwave | 12.8AMPS |
| • Coffee Pot | 9AMPS |
| • Toaster | 10AMPS |
| • Hair Dryer | 10AMPS |
| • RV Refrigerator on electric | 5-8AMPS |
| • 12V Converter | 5.5AMPS |
| • TV | 2AMPS |

You can easily see that in the morning if you start your Air Conditioner, with the water heater and refrigerator both on electric, then start your coffee pot, make some toast, and watch TV, you are pulling as much as 57.5AMPS when all are working at maximum capacity. Then if someone needs to fix their hair with a hair dryer, LOOK OUT! To compound the problem, each and every time a breaker trips, it weakens the Amperage protection initially rated for. In other words, if a breaker was originally rated for 30A, it might drop an Amp or two each time leading to extra unnecessary work to replace your equipment.

Activities Update - Our volunteers as well as our workers are NOT babysitters. Children under 10 MUST be accompanied by an adult to all public activities - even Kids Bingo.
