

*"Quality Construction, Customer Service & Value -
We Have It All"*

Intermountain RV's 100% all aluminum frame work, combined with the standard Filon[®] exterior, provides superior strength yet is lighter than the competition.

Intermountain RV located in NE Oregon, next to the Eagle Cap Mountain range, was started in the winter of '2000. We are a small company consisting of family, friends and hand picked employee's from the industry that are the best of the best.

Our goal is to have the best quality, construction, customer service and value; out on the market. Only 1 to 2 campers go out the door each day with a thorough inspection in order to meet our very high standard of quality. Quality above quantity.

The construction of an Eagle Cap is what we believe to be the best on the market. Our all welded aluminum framing can't be beat. Both internal and external aluminum engineered framing including 3" trusses, 16" on center, and aluminum floor joists.

Striving for the best in customer service; we are small enough that we can make changes if needed. A customer can always talk to one of the owners with any questions, concerns, or ideas about their camper. Stop by for a tour of the plant or servicing direct from the factory.

Last but not least is value. All the owners wear many hats and are very involved in every aspect of production. We also have very low overhead. This allows us to add more standard features, better quality parts and achieve a higher standard of construction so that we can offer the best in camper value.

We believe that our pickup campers are the best built, highest quality campers on the market today.

All of our Eagle Cap pickup campers offer: Complete welded Aluminum construction, Fiberglass exterior, full 2" walls with R-11 Foam board insulation and all enclosed tanks for cold weather.

Our 800 Lite is the only Lite that has these standard features: Welded Aluminum construction, 2" walls, Fiberglass exterior, R-11 Foam board insulation, all enclosed tanks, all wood cabinets with screwed face frames, 34 gallons of fresh water, extended cab with Queen mattress, full skirt package for long or short box pickups and they are made to the same standards as our other models.

Our 800 Model is unlike any other camper in its class. It offers the same sized appliances and capacities as our larger models, tastefully fitted into an 8' camper. The 800 Model comes with a rollover couch for extra floor space. This camper also fits on long or short box pickups.

Our 850 model is designed for a long or short box pickup and is available with or without a slide-out. It has large capacities, a dinette slide-out, larger bathroom and generator capabilities. It has all the same features as our larger campers but can also fit a short box pickup.

Our 950 model is our best selling model. It is designed for a long box pickup and is available with or without a slide-out. It has a very nice comparison of space and size.

Our 1150 model is designed for a long box pickup. It also is available with or without a slide-out. It has a large dry-bath, very open floor plan and lot's of storage and room.

Eagle Cap VS. The Other Guys - Compare the Construction, Quality and Value!

- 100% Welded aluminum structure, all windows and doors have welded in radius blocks VS. wood sticks stapled together and plastic radius blocks stapled in.
- Engineered aluminum trusses 16" on center that can support over 200 lbs VS. wood trusses that snap with 30 lbs. Ours is a true walk on roof.
- The roof is sealed 4 ways on every edge with standard gutters and awning rails on all ends VS. sealed 2 ways and no rail or gutters.
- 3" crowned roof vs flat.
- Aluminum stringers in floor with 5/8 OSB floors ensure a solid no give floor VS. 1/2" plywood which is spongy.
- 6 Steel supports under tanks keeps you from having to support the bottom of your camper when full of water VS. no supports losing the ability to take your camper off when full of water.
- One piece fiberglass front wrapped all the way around without seams VS. 3 pieces with seams.
- Radius cornered windows, doors, lug doors VS. square and outdated looking ones.
- Taller and wider entrance door with large window for backing up VS. small doors with small or no lower window.
- 2" walls with R-11 insulation VS. 1 3/4" with R-7 or R-9.
- Completely enclosed and heated tanks VS. plumbing lines, tanks and Lp lines hanging outside of the unit.
- Powder coated aluminum bumper VS. painted steel that rusts or no bumper at all.
- Red-hot and blue-cold water lines that are freeze proof VS. same color hot/cold lines that are not freeze proof.
- Battery disconnect switch VS. none.
- Wood cabinet face frames screwed together VS. pressboard and stapled.
- Every cabinet or compartment is fully finished inside VS. only the obvious ones at best.

Standard Features

- Standard luggage rack and ladder VS. optional.
- Standard Gas/Electric/DSI water heater VS. optional.
- Standard 6 cu. Ft. double door fridge VS. optional.
- Standard bi-fold range cover VS. optional.
- Standard inner spring queen mattress with pillowcases and bed spread VS. optional.
- Standard pump by-pass/semi-auto winterization VS. optional.
- Standard battery disconnect switch VS. optional.

NOTE: Some of these features may be on certain competitive units, where as others may not.
