

# SOARING EAGLE CAMPERS

THE LEADING INNOVATOR IN AFFORDABLE,  
LIGHTWEIGHT TRUCK CAMPING

## AQUILA

AWARD WINNING DESIGN!

**BUILT TO LAST**

# SOARING EAGLE CAMPERS

While a number of truck campers on the market are constructed with wood in the structure, SOARING EAGLE CAMPERS constructs our campers using only all-welded, tubular

aluminum and composites, covered by a thick, seamless fiberglass exterior. Both the exterior fiberglass and interior wall and ceiling coverings are backed with a composite material, not thin luan wood like a lot of others.

This attention to detail provides

Soaring Eagle owners with the longest lasting, lightest weight, most durable and moisture resistant truck campers on the market!

Soaring Eagle's engineers design each camper to be as strong as possible, using not only 1.5" tubular aluminum, but also 3" aluminum with studs located a minimum of 16" on center - not just around the perimeter like some of our competition. All of this aluminum structure ensures that our camper will stand the test of time as it bounces down the road. The use of 3" tubes, especially in areas where the camper is going to experience the most stress, ensures that our camper will stand up to the rigors of the road for decades - not just a couple of years.

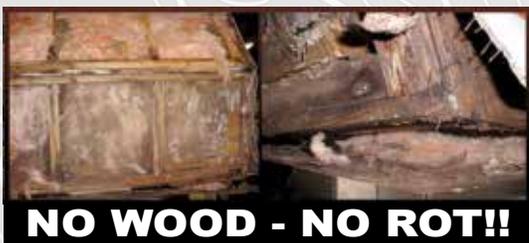

The floors of the AQUILA are made of thick, durable, water resistant composite decking.

While there are other truck campers that look good on the outside, we always encourage customers to look "underneath" all of the bells and whistles to see just how a camper is constructed before they make their purchasing decision. When they do, we are confident that

they are going to like what they see in the AQUILA truck camper line.

The entire STRUCTURE of the AQUILA model is actually wood-free, providing our customers with years of care-free usage along with the best value for their money!

**ENGINEERED AND  
CONSTRUCTED TO STAND  
THE TEST OF TIME.**

Most campers look great on the outside. But what is most important is what is behind all the eye appeal? Soaring Eagle Campers offers factory tours that show exactly how we build each of our unique campers. You will find only quality construction using welded tubular aluminum and composites - there is not a single sliver of wood found here!

This is not just about being lightweight, but building the strongest, most durable campers on the market. We use studs every 12-16" - not just around the perimeter like some of our competition. The entire camper is filled with block foam and bubble foil insulation so our campers hold their temperatures, keeping our owners comfortable in hot or cold weather.

The sleek, clean exterior lines of the new AQUILA model from Soaring Eagle look good any truck!

The AQUILA offers stunning mountain graphics combined with sleek lines and our trademark Eagle head on the back. Whether you choose the arctic white or the platinum gray exterior fiberglass, this is a camper that is going to turn heads wherever you go.

## SLEEK EXTERIOR DESIGN

The AQUILA 6.5 is designed for both a heavy-duty half ton truck (properly equipped) or any 3/4 ton truck and larger.

Featuring a lower base design that will fit in a 6.5' bed with the tailgate closed (so you can continue to use your rear camera and built-in steps), or it will also fit in a 5.5' bed truck with the tailgate down.

The AQUILA comes standard with a spacious interior including a 60x80 queen bed (*East/West, or North/South using our slide out extension*); an LP furnace, water heater and cooktop range; electric jacks; 12V refrigerator with freezer; Maxxair fan with rain sensor; 200W roof solar; 100A lithium battery; nice size kitchen area; roomy u-shaped dinette/bed; built in cassette toilet; exterior hot/cold water, and more.

## INTERIOR DESIGNS FEATURING STYLE, FORM, AND FUNCTION!

Popular options in the AQUILA include a roof A/C with heat pump; microwave oven; exterior shower surround; platinum gray exterior fiberglass; side awning; rear awning; additional roof solar panels; additional batteries; 3k power inverter and more.

Offering a great mix of size, weight, comfort, conveniences and quality fit and finish, the AQUILA is your best choice for affordable living.

You'll appreciate the AQUILA's large u-shaped dinette featuring upgraded cushions and an articulating table base. There is room to sit and work, enjoy meals or to play games during inclement weather.

The dinette of the AQUILA quickly and easily converts to a spacious secondary sleeping area that can accommodate two adults.

**CLEAN • ELEGANT**

## **FUNCTIONAL**

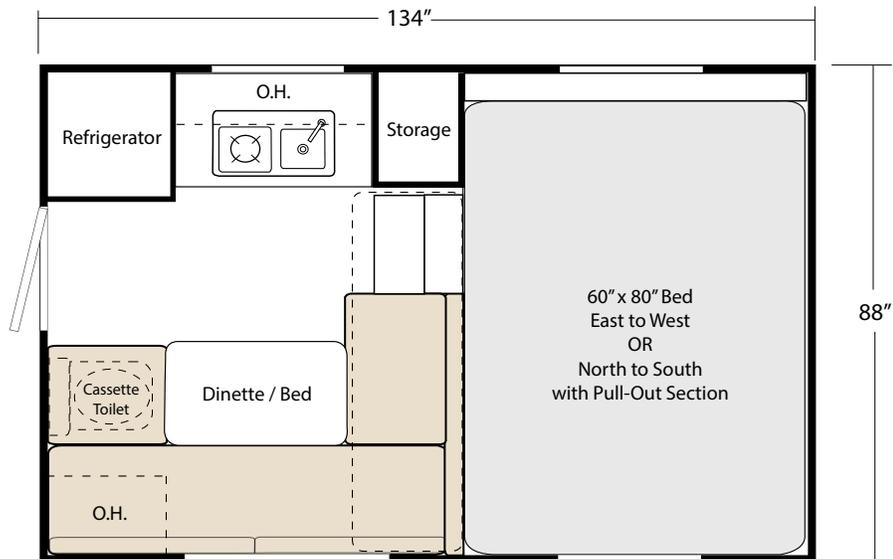

Did we mention that the AQUILA dinette also features a very well hidden, cassette toilet? Our owners appreciate the fact that they do not have look at their commode all day long when camping, but can easily access it when needed.
